RE: The Housing Authority of the City of Atlanta, Georgia ("AHA")
Grady Homes

Dear Mr. Cash:

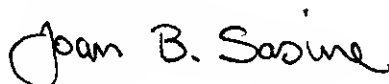

Enclosed is additional sampling information for the above-referenced housing development. The initial HSRA notification was submitted to the Georgia Environmental Protection Division ("EPD") on October 21, 1997 for a release of lead in soil. Since the initial notification, AHA retained ATC Associates, Inc. ("ATC") to perform additional soil testing. Testing for lead in soil was performed throughout the housing development and also at the locations that previously exceeded the HSRA notification concentration.

Out of thirty nine (39) composite samples obtained by ATC in August, 1999, only two (2) samples exceeded 400 ppm. (See Attachment A). On January 26, 2000, ATC resampled in the two (2) areas from which these composite samples were obtained. ATC also tested the three (3) areas that exceeded the notification concentration (as amended) in 1995. All of the January 26, 2000 samples were below 400 ppm. (See Attachment B). Additional information concerning the 1995 sampling by Law Engineering is also enclosed (see Attachment C).

Mr. Tim Cash
February 14, 2000

5.0 ANALYSIS RESULTS

5.1 Dust Wipe Samples

The HUD Interim Guidelines for LBP establish maximum allowable lead dust levels of 200 micrograms per square foot ($\mu\text{g}/\text{ft}^2$) for floors, 500 $\mu\text{g}/\text{ft}^2$ for window sills, and 800 $\mu\text{g}/\text{ft}^2$ for window wells. Wipe sample analysis results, grouped by unit, are located in Appendix A. The results of the 176 dust wipe samples, with the exceptions noted below, are below the established maximum allowable lead dust lead levels.

Table 2. Dust Wipe Sampling Results Exceeding Maximums

Dwelling/Unit	Sample No. (sample#-site#-sample#)	Location	Sample Results ($\mu\text{g}/\text{ft}^2$)
Apt. 44	08-1221-W03 (sill)	116 Bell St. SE	532.0
Apt. 27	08-1224-W03 (sill)	150 Bell St. SE	1036.0
Apt. 27	08-1224-W05 (well)	150 Bell St. SE	2906.0
Apt. 343	08-1232-W08 (floor)	41 Hilliard St. SE	356.0
Maintenance	08-8035-W04 (floor)	101 Hilliard	410.0

5.2 Soil Samples

Currently no standards exist for lead in soil. The EPA is examining lead in soil to determine hazardous levels. HUD is currently gathering lead in soil data from its LBP Risk Assessments and providing this information to the EPA. For present use, some Authorities recommend that lead (Pb) in soil not exceed 300-500 parts per million (ppm). Soil sample analysis results, grouped by unit, are located in Appendix A. The 42 soil samples, with the exceptions noted below, are below the recommended maximum allowable lead levels:

Table 3. Soil Sample Results Exceeding the Maximum
